

Built-Up Area Roads

Description

- Built-Up Area Roads (BUA Roads) is data that identifies if a road is inside or outside a Built-Up Area
- Unlike the Urban flag, which represents the housing area for display purposes, and which follows the Built-Up Area polygon for inclusion, Built-Up Area Roads is primarily based on the location of the Start and End of the Built-Up Area sign or, when the sign location is not known or not verified, on the location of the Built-Up area polygon
- Certain traffic related rules might apply inside and outside the Built-Up Area; Built-Up Area Roads can be used to trigger ADAS functionalities based on the location of the vehicle inside or outside a built-up area
- BUA Roads is not a product by itself but rather a feature

Data Features

- Built-Up Area Roads attributes:
 - BUA roads
 - BUA roads verified

Availability

- Commercially available

Format

- Available in the following formats: GDF and RDF
- For GDF included as default for the ADAS flavors (enhanced curvature, height and slope)
- For RDF included as part of the ADAS plugin

Coverage

- 25 countries in EMEA
