

# Census Boundaries

## Description

- Census Boundaries is data that provides boundaries for selected geographic areas within a country that are defined by the country's official census authority
- Census Boundaries enable Census FIPS codes to be used to join demographic data from secondary providers, and then used for geo-marketing and site selection applications

## Data Features

- Geographies (vary by country) are linked to street centerlines in the HERE Map Content: state boundaries, county boundaries, census division, states & federal districts, municipality census area and more
- Demographic information: an LAT table detailing population, housing, and other census information by geographies

- Census boundaries with demographics available for the United States\*
- Census Boundaries with Demographics available for United States\*

## Availability

- Commercially available

## Format

- Available in the following formats: ESRI Shapefile and MapInfo TAB file

## Coverage

- Seven countries in the Americas and Australia and four United States territories

\* Census Boundaries with Demographics is available as a separate product
