

# Enterprise Admin Boundaries

## Description

- Enterprise Admin Boundaries is a global set of administrative content layers providing polygonal boundaries for business intelligence, search and rendering use cases. This product has standardized each administrative level for global consistency. The product also contains standard layers of generalization to allow for different zoom and rendering views.

## Data Features

- This product contains a global set of polygons representing government administration boundaries. Enterprise Admin Boundaries references Core Map coded boundaries, creates polygons which are not present in core map, and may also contain additional boundaries, allowing for an expansion to what is available in Core Map.

- This product contains various content layers representing the administrative boundary. One layer is the detailed boundary, aligned to our Core Map. It also contains three levels of generalized boundaries to allow for different zoom levels and rendering views.
- This product contains a detailed hierarchy of the administrative structure to allow for business intelligence and search use cases.

## Availability
